Simplicity That Works

The Good News, for decades, role-play has been a trusted tool for enhancing quick decision making and for sharpening both verbal and non-verbal communication skills, all of which are highly valued characteristics needed for career advancement.

Even Better News, recent advances in audio/video technology enables instructors to record, bookmark, annotate, and debrief student role-plays.

Evidence-Based Learning is the *Gold Standard* of Communication Teaching

Instructor Led Video Feedback (**otherwise known as Evidenced-based Learning)** allows your students to develop confidence through interactive role-plays. Whether it's handling complex negotiations, giving highly polished presentations, or any other career where advanced interpersonal communication skills is considered a valued asset; evidence-based learning gives your students a competitive advantage as they transition into the real world!

In fact, evidence-based learning is so successful, it's considered The Gold Standard of Communication Teaching because it accelerates formative development, boosts long term knowledge retention, and increases Return on Investment.

Here's the Best News Yet! Some savvy schools (spanning business, communication, and others) are using Evidence-based Learning technologies - like Interact Solution - to generate revenue for their departments.

The reason is that it's a highly competitive market and corporations are willing to pay top dollar for direct access to the best trained sales, marketing, and communications graduates. They do this by allowing corporations to put their logo on our application and giving corporate recruiters access to student's video portfolios to assess for potential hires.

Why Invest In Evidence-based Learning?

LEADERSHIP DEVELOPMENT

Great leaders understand that non-verbal communication skills are often more important than the actual words being said. Having the ability to review annotated role-play videos allows students to see and hear how to improve their body language, cadence of their speech, tonal inflection, audible pauses, use of redundant words, proper amount of eye contact and other nuances that can make or break a speech, presentation, or derail a complex negotiation.

BUILDS CONFIDENCE

When your students role-play, you can throw any number of situations at them. Role-playing provides a safe environment to encounter these scenarios for the first time, which builds confidence in team members that can help them in their day-to-day roles.

CREATIVE PROBLEM-SOLVING

No matter how outlandish a situation you create in a controlled environment, generally, something even more bizarre is bound to happen on the job. Role-playing will at least give your students the chance to get some experience in handling difficult situations and in developing creative problem-solving skills.

DEVELOP LISTENING SKILLS

Role-play exercises requires outstanding listening skills. In addition to understanding the words the other person is saying, it's important for students to pay attention to their body language and cues being displayed by their targeted audience (are they engaged, looking lost, or yawning). Better to have your students develop these skills while role-playing than when they're trying to perform in the real world.

ABOUT US

Interact Solution was developed by listening to role-play experts like you. Our directive was to create an Evidence-based Learning video management platform that is easy to use by instructors and students regardless of technical savvy. In addition, they wanted a mobile application that could be used away from the classroom allowing them to extend their training into the field.

Based on a decade of client feedback, our solution is designed to work within any environment spanning the entire educational spectrum.

Today, prestigious organizations all over the country rely on our technology to give their students a highly competitive advantage as they transition from academia into the real world.

Noteworthy Features

Video Distribution
Easily store and distribute content by individuals, groups, departments, sections, classifications, organizations and/or locations.

Live Streaming
Live streaming via my web browser for real-time coaching and debriefing.

Enterprise-Level Security
2048 bit encryption with SSL Certificates and each individual has a unique profile.

Video Compression
60% compression means that all recordings are accessible in less than 60 seconds regardless of size!

Multi-angle video capture
Capture wide, medium and close-ups at once with the most flexible camera support in the industry. Web, IP, and SDI cameras are all supported.

Single Sign On
Integrates with LDAP and Active Directory for Single Sign On and easy import of student account information.

Automation
Assemble user portfolios automatically while tracking performance and progress. The comprehensive record of all center activities for each user is filterable and searchable.

Government Compliance
HIPPA and FERPA Compliance
